

Super Admin User Guide

Enterprise Platform · Version 2.0

Medical aid administration, member self-service, biometric identity, logistics, communications, finance, HR & payroll.

GENFIN Medical Aid · 60,000+ lives covered

Developed & operated by Jonomi Digital · onomi.digital

Project lead & authorising signatory: Dr Washington Kapapiro

Issued July 2026 · Confidential — internal use only

INTRODUCTION

About this guide

This guide is for GENFIN **super administrators** — the staff who run the whole platform. It covers every module of the enterprise system and the enhancements delivered in Version 2.0. The platform is a browser-based application that can also be installed on laptops and phones and keeps working when the internet is down.

Everything shown in the platform is role-restricted and recorded. If you can see a figure or a member record, your action on it is logged to the audit trail.

What's new in Version 2.0

- **Enterprise Accounts & Finance** — full general ledger, journals, trial balance, balance sheet, cash flow, receivables, payables, bank reconciliation, multi-currency (USD/ZWG) and ZIMRA tax.
- **Full HR & Payroll** — employee records, itemised payslips with PAYE/NSSA/AIDS levy/pension, leave, recruitment, training and formal performance appraisals.
- **Order Tracking & Driver App** — live driver map with ETA, a tracking code and release PIN generated at booking, a dedicated driver app, and a WhatsApp PIN fallback when the driver has no data.
- **WhatsApp Business** — a two-way inbox, approved templates, broadcasts, automations and the Meta API connection panel.
- **BioVerify facial recognition** — face scanning added alongside fingerprint, sold as a separate module, plus a dual enrolment method so every member and dependent can be registered.
- **Member medical records** — dependents, conditions, allergies, medications, registered doctor and a full platform/medical history for each member.
- **Audit log** and an **installable offline app** across the whole platform.

GETTING IN

1 Access, roles & security

Staff sign in from the portal hub (**login-select.html**) and are taken to the modules their role permits. Privileged actions require two-factor authentication.

Role	Typical access
Super Admin	Everything, plus staff user management, roles and system configuration
Finance / Accountant	Accounts & Finance, statutory, read-only members
HR Manager	HR & Payroll, performance, recruitment
Claims Officer	Claims queue, member records
Member Services	Members, medical profile, WhatsApp desk, enrolment
Dispatch / Ops	Order Tracking, driver assignment
Pharmacist	BioVerify terminal, dispensing
Driver	Driver app only — assigned jobs, PIN release

Security principles built in: role-based access control, two-factor for privileged users, encryption of sensitive data, an append-only audit trail, and Zimbabwe data residency for member health and financial data.

OVERVIEW

2 Super Admin dashboard

The dashboard (**superadmin.html**) is your home. It shows headline numbers across the organisation and the grouped navigation to every module. From here you can add staff users, jump into any module, and reach system configuration.

MEMBER 360

3 Members & medical records

Open **Members**, search, and click a member to see their record. **Full medical profile** opens the 360 view (**member-profile.html**) with six tabs:

- **Overview** — personal details, next of kin, and the member's registered **primary doctor / GP** (name, practice, phone, HPA number). Use Register / change to set or update the doctor.
- **Dependents** — every dependent with their relationship, age, mini medical record and biometric status. Add dependents here.
- **Medical records** — chronic conditions, allergies, current medications, vitals and recent labs, immunisations and uploaded documents. This is protected health information: access is logged and shared only with consent and the registered doctor.
- **History & usage** — a timeline of everything the member has done since joining: claims, pre-authorisations, dispenses, deliveries, WhatsApp interactions, verifications and plan changes.
- **Benefits** — live benefit balances.
- **Biometrics** — enrolment status for the member and the whole household, with a link to enrol anyone still outstanding.

IDENTITY

4 BioVerify — enrolment & verification

BioVerify confirms who is really collecting care or benefits, using **fingerprint and facial recognition**. It is also sold as a standalone product to other pharmacies and clinics.

Enrolling members (both modalities)

Open **BioVerify** → **Enrol biometrics** (**bioverify-enrol.html**). The four-step wizard captures both fingerprint and face for a member or dependent:

- **1. Person** — choose the member/dependent, confirm ID and record consent.
- **2. Fingerprint** — capture at least two fingers (both index fingers recommended).
- **3. Face** — capture the face using the device camera; if no camera is available it falls back to a guided capture.
- **4. Confirm** — both templates are encrypted (no raw images stored) and an enrolment ID is issued.

The coverage panel tracks progress toward the goal that **every member and dependent is enrolled**, lists everyone still outstanding, and can send WhatsApp enrolment invites. Run enrolment drive schedules a campaign by branch or employer group.

Verifying at the point of care

At a pharmacy, staff open the verification terminal (**bioverify-facial.html** / **biometric/verify.html**), choose **Fingerprint** or **Face**, and scan. The system returns a match with confidence, shows the member's authorised

prescriptions and benefit balance, and logs the dispensing event.

ADJUDICATION

5 Claims

The Claims queue (**staff-claims.html**) lists claims for assessment. Officers review, approve or decline; approvals flow to Accounts for payment and notify the member (including by WhatsApp).

ENTERPRISE ACCOUNTING

6 Accounts & Finance

staff-finance.html is a full accounting system. Use the currency switch (USD / ZWG) in the top bar to re-present every figure. Tabs:

Tab	What it does
Income statement	Revenue, expenses, net surplus and insurance ratios
Balance sheet	Assets, liabilities and equity (IFRS presentation)
Cash flow	Operating, investing and financing activities
General ledger	Chart of accounts with debit/credit and balances
Journals	Double-entry journals; draft, review, then post to the GL
Trial balance	All accounts with debit = credit confirmation
Receivables	Aged debtors with reminders and escalation
Payables	Supplier bills and scheduled payment runs
Bank rec	Match bank statement lines to the ledger
Tax & statutory	VAT and PAYE/NSSA/AIDS levy due to ZIMRA

Approved payroll and claims post automatically into the ledger, and statutory figures flow through to the Tax & statutory tab.

PEOPLE

7 HR & Payroll

staff-hr.html runs the full employee lifecycle across seven tabs: People (records), Payroll, Leave, Performance, Recruitment, Training and Statutory.

- **Payroll** — click any employee to see an itemised payslip: basic and allowances, then PAYE, NSSA, AIDS levy, pension and medical aid deductions, and net pay. Submit the run for Finance approval; it posts to the ledger and generates payslips and a bank file.
- **Performance** — run appraisal cycles: KPI scoring, competency ratings, an overall rating and a development plan with sign-off.
- **Statutory** — PAYE (P2), NSSA schedule, AIDS levy and manpower levy with a compliance calendar of due dates.

PHARMACY STOCK

8 Inventory

staff-inventory.html tracks medication stock, purchase orders, the pharmacy partner network and the daily dispensing log.

LOGISTICS

9 Order Tracking & the Driver App

staff-tracking.html is the dispatch control tower. It shows active deliveries, a live map of the driver's position with ETA, a delivery journey timeline and the recipient's release PIN.

Booking a courier

Click **Book courier**, enter the order, recipient and driver, then **Book & generate code**. The system creates a **tracking code** (e.g. GEN-DLV-4821) and a **release PIN**, and pushes both to the driver app and the recipient.

The driver app

Drivers use **driver-app.html** (installable on a phone). They sign in, see the jobs assigned to them, navigate to each address, and on arrival **enter the recipient's PIN to release the goods**. The driver's live location is what feeds the tracking map. If the driver has no mobile data, they can **submit the PIN over WhatsApp** and dispatch closes the job the same way.

COMMUNICATIONS

10 WhatsApp Business

staff-whatsapp.html is a full WhatsApp desk: a two-way **Inbox**, approved message **Templates**, **Broadcasts**, **Automations** (keyword bot, claim and delivery notifications, refill reminders) and the **Connection** panel showing the Meta WhatsApp Business API details, webhook and messaging tier.

Members can check balances, get claim updates, receive delivery PINs and tracking links, and drivers can return delivery PINs — all through WhatsApp.

ACCOUNTABILITY

11 Audit log & compliance

staff-audit.html records every create, update, delete, approval and login with the user, role, module, before/after values, IP address and timestamp. Records are **append-only** — they cannot be edited or removed — supporting accountability and Zimbabwe data-protection requirements. Filter by module, user, action or date, and export a signed report.

ANYWHERE

12 Installing the app & working offline

The platform is a Progressive Web App. To install on a laptop, open it in the browser and choose **Install** (or **Add to Home Screen** on a phone). Once installed it launches like a normal app and, thanks to on-device caching, the pages you have opened keep working **without internet**. Drivers especially benefit — the driver app runs offline and the PIN can still be sent by WhatsApp.

CONTACTS

13 Support & sign-off

The platform is developed and operated by **Jonomi Digital** (jonomi.digital). All documents are signed off by **Dr Washington Kapapiro**. For support, feature requests or new-module enquiries, contact the Jonomi Digital team.
