

MEMORANDUM

Platform evaluation — live test drive access

To GENFIN Medical Aid Fund — Management
From Dr Washington Kapapiro, Jonomi Digital
Date 7 July 2026
Re Evaluation of the GENFIN Enterprise Platform (live demo environment)

Your GENFIN platform is now live for evaluation. It is a working system, not a slideshow: every module reads and writes one shared database, and an action in one module updates all the others in real time. This memo gives you the access credentials and a guided route through the platform so your team can evaluate it effectively.

1. Access

Open **genfin-platform.vercel.app** in any modern browser (phone, tablet or computer). The public website is the front door; sign-in portals are at "Portal login". A page showing all role portals side-by-side is at **genfin-platform.vercel.app/login-select**. The administrator login is deliberately discreet — a small "Admin login" link in the website footer and beneath the member sign-in form.

2. Demo accounts

All accounts use the password: **demo2026**

Sign in as	Email	What you will see
Super Administrator	admin@genfin.demo	Everything: live dashboard, realtime activity, who is online, all modules
Member (Tadiwa Moyo)	member@genfin.demo	Gold Plan member: benefits, ordering, payments, documents
Head of HR	hr@genfin.demo	Staff approvals, payroll, offboarding, HR audit log
Finance Manager	finance@genfin.demo	General ledger, trial balance, invoices, payments
Pharmacist	pharmacy@genfin.demo	Live inventory, stock movements, deliveries
Former staff member	tarisai.former@genfin.demo	Restricted portal: end-of-employment notice, payslips, reference letter

3. Suggested evaluation route (15–20 minutes)

#	Step	What to look for
1	Sign in as the member and order glasses or medication (Order meds & optical)	Stock is checked live; the confirmation lists your invoice, assigned driver and delivery date
2	Still as the member, press "Pay now" on the invoice	Instant receipt in Messages — both the portal alert and the email copy
3	Sign in as Super Administrator	The dashboard shows your order in the realtime feed; cash at bank has increased; "Who is logged in" shows current users — your staff monitoring view

#	Step	What to look for
4	Open Accounts as Finance (or admin)	Trial balance reads "Balanced"; the journal shows the double entries your order created; stock value matches the Inventory ledger account
5	Open Inventory	The quantities you ordered have been deducted, with an audit trail entry referencing your invoice
6	Sign in as HR and approve the pending applicant (Kudakwashe Zhou): assign a role and employment date	The approval is logged with your name and timestamp; the new staff member can now sign in and download a proof-of-employment letter and payslip
7	As HR, try the Offboarding panel	Reasons for termination are a fixed, legally-sound list aligned to the Labour Act; the letter automatically becomes a work reference (dates and role only)
8	Sign in as the former staff member	Restricted portal: employment-ended notice with the recorded reason, payslips still downloadable
9	As the member, open Membership certificate / Benefit schedule	Official branded documents; print or save to PDF; QR verification

4. Notes for an effective evaluation

It is a shared demo. Everyone uses the same demo data, so you may see orders and activity created by other evaluators — that is the realtime system working, not an error. Data may be reset periodically.

Emails are simulated. In this evaluation environment, email confirmations appear in the member's portal Messages panel marked "email" rather than being sent to a real inbox. Production connects SendGrid/WhatsApp for real delivery.

Demo sign-in. Credentials are simplified for evaluation. The production phase replaces them with hardened authentication including two-factor for privileged users, plus Zimbabwe data residency hosting.

Staff signup. You can create your own test staff application from "Create your staff account" on the sign-in page, then approve it as HR — this demonstrates the full onboarding chain including the approval audit log.

Feedback. Note anything you would change — wording, workflow order, extra fields, reports you need. We will fold your feedback into the next phase.

We look forward to your evaluation.
